Risk Disclosure Statement

IMPORTANT NOTICE: Stock, Futures, Options & Forex trading have large potential rewards, but also large potential risks. You must be aware of the risks and be willing to accept them in order to invest in the stock, futures and options markets. Don't trade with money you can't afford to lose. This is neither a solicitation nor an offer to Buy/Sell stocks, futures, options or Forex. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed on the web site. The past performance of any trading system or methodology is not necessarily indicative of future results.

SEC Disclosure:

Past performance does not guarantee future results. We do not promote any stocks or options of any kind on this site. We provide chart analysis Principles and not investment advice. We do not and have not received any compensation from any company whose stock appears on this site or in our manuals and we have no financial interest in the outcome of any trades mentioned herein. There is substantial risk of loss trading stocks and options. You need to determine your own suitability to trade stocks and/or options and there may be tax consequences for short term profits/loss on trades. Consult your tax advisor for details on this if applicable.

Commodity Futures Trading Commission Disclaimer:

"Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading, for example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual results."

Additional Notices:

All information given is provided for informational purposes only. Any trades placed upon reliance on any of our Chart Analysis Principles are taken at your own risk for your own account. Past performance is no guarantee of future results. While there is great potential for reward trading futures and options, there is also substantial risk of loss in all futures and options trading and you must decide your own suitability to trade. Futures trading results can never be guaranteed. This is not an offer to buy or sell futures, options or commodity interests. Most systems are based on historical formulas which have worked in the past. However, what has happened before may or may not happen again. You can lose all your money trading futures and options and you must decide your own suitability as to whether or not to trade. Only trade with true risk capital you can afford to lose. Only trade markets you can properly afford to trade. Properly funded trading accounts typically perform better than those that are not. Never risk more than 5% of your account on any one trade. Stop trading a system if it doesn't fit your trading style and if you find

you cannot follow the signals.

There are no guarantees or certainties in trading. Reliability of trading signals for mechanical systems are in probabilities only. Trading involves hard work, risk, discipline and the ability to follow rules and trade through any tough periods during a system's drawdowns. If you are looking for a guarantee, trading is probably not for you. Most people lose trading. One of the reasons is that they lack discipline and are unable to be consistent. A system can help you become consistent. The ability to be disciplined and take the trades is equally as important as any technical indicators a trader uses. Ironically, worrying about the money aspect of trades can contribute to and cause a trader to make trading errors. Therefore, it is important to only trade with true risk capital.
